
International conference The Swan Song of Anthropocentric Governance in Europe

On 27-28 November 2025, an international conference with a rather provocative title **The Swan Song of Anthropocentric Governance in Europe (?)** was held at the **Faculty of Law in Prague**. It aimed to reflect on the introduction of artificial intelligence across various European jurisdictions and to answer whether artificial intelligence has the potential to replace human beings—civil servants—in the near future.

The conference was opened by Diana U. Galetta, Full Professor at the Milan Law School, with a presentation of her newly published book *Artificial Intelligence and Public Administration* (Edizione Scientifica, 2025). This was followed by presentations on the legal basis for the use of AI in administrative proceedings in Spain and Germany, as well as a discussion of planned changes in the Czech Republic. Other presentations focused on how artificial intelligence is already being used today in healthcare, environmental protection, public procurement, etc. The last panel was devoted to the outlook for the future, including a presentation of the BRISE project, which aims to enable the issuance of building permits using AI.

The swan song of anthropocentric administration in Europe took place as part of the 4EU+ mini-grant *Europe: A Laboratory of a Digital State*. It was financially supported by a donation from the Prague branch of the international law firm White and Case, to whom we extend our thanks.

Written versions of the contributions will be published in a special issue of the Milan-based [magazine Ceridap](#).

Insights and experiences shared by conference participants:

Alessia Monica University of Milan

It was a pleasure to be in Prague again this year for the conference Swan Song of Anthropocentric Administration in Europe. I chose to present on the role of AI in the health sector, starting from the current outlook of the Italian National Health Service and the persistent shortcomings related to waiting lists. The introduction of AI tools into health administrations does indeed raise several issues from the perspective of EU administrative law. These issues relate to the multilevel legislative framework and governance, the use of AI in medical assistance, and its implications for patient

rights. There is also a need to ensure that AI effectively contributes to improving the quality of care and quality of life at the EU level. Lastly, thanks to the 4EU Plus project, it is possible to engage in comparative exchanges with colleagues from other universities, which are essential for an effective development of an integrated EU administration.

Kristyna ŠopkováCharles University

I was honoured to take part in the conference and to engage in discussions with scholars from leading European universities actively. For me, the greatest value of the conference lay in the opportunity to follow how similar questions concerning the use of artificial intelligence in public administration are addressed across different legal systems. The diversity of doctrinal approaches and institutional settings made it possible to reflect not only on current regulatory solutions but also on their future development. The discussions repeatedly showed that the key challenge ahead is not the technology itself, but the ability of public law to respond to it in a way that preserves responsibility, transparency and human involvement in administrative decision-making.

Marc Olivier BuslingerUniversity of Geneva

I am particularly thankful to the EU4+ summit and the Department of Administrative Law of Charles University in Prague, and in particular to Prof. Handrlíčka, for the invitation to present at this international conference of a rare quality. The outstanding scientific exchanges covered many pressing topics around the digital transformation of administrations and the influence of the legal framework on automated administrative decision-making. Particularly striking were the similarities of the problems across countries and fields of administrative law. This event will surely be a “nest” of inspiration for all participants.
