# Exploring Open Science: Insights from Our Latest Workshop

---

14 March 2025

**On March 12, 2025, early-career scientists gathered for an insightful session on Open Science, led by experts from the Open Science Support Centre of the Central Library of Charles University, provided an essential introduction to the principles of Open Science, open publishing strategies, and copyright considerations.**

Open Science is an evolving approach that aims to enhance transparency, collaboration, and accessibility in research. The European Commission encourages Open Science as part of its research funding and policy framework, highlighting its potential benefits for innovation and societal impact. **In many European-funded projects, open access to research publications and data is increasingly promoted, aligning with broader efforts to make scientific knowledge more widely available to researchers and the public.**

We sincerely thank the lecturers from the Open Science Support Centre for sharing their expertise, as well as all participants for their active engagement and valuable contributions to the discussions!

The Open Science workshop was part of our **spring training series for early-career researchers at Charles University**. With a total of ten specialized courses available, this series supports early-career scientists in developing key competencies based on the European Competence Framework for Researchers (Research Comp). **For a full list of upcoming courses in our spring training series, [visit our website](#) and explore opportunities to further enhance your research skills.**
